Traditional Alarms

VS

SOLINK®

Traditional monitoring solutions rely on outdated sensors with no ability to confirm or assess the level of threat of emergencies in real-time.
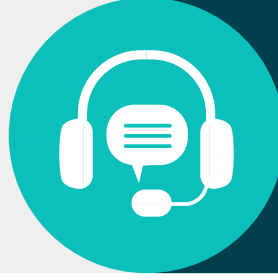

Solink provides reliable video-based alarm monitoring. Live agents review real-time video footage to assess threat levels, deter unwanted behavior and dispatch first responders on real emergencies.

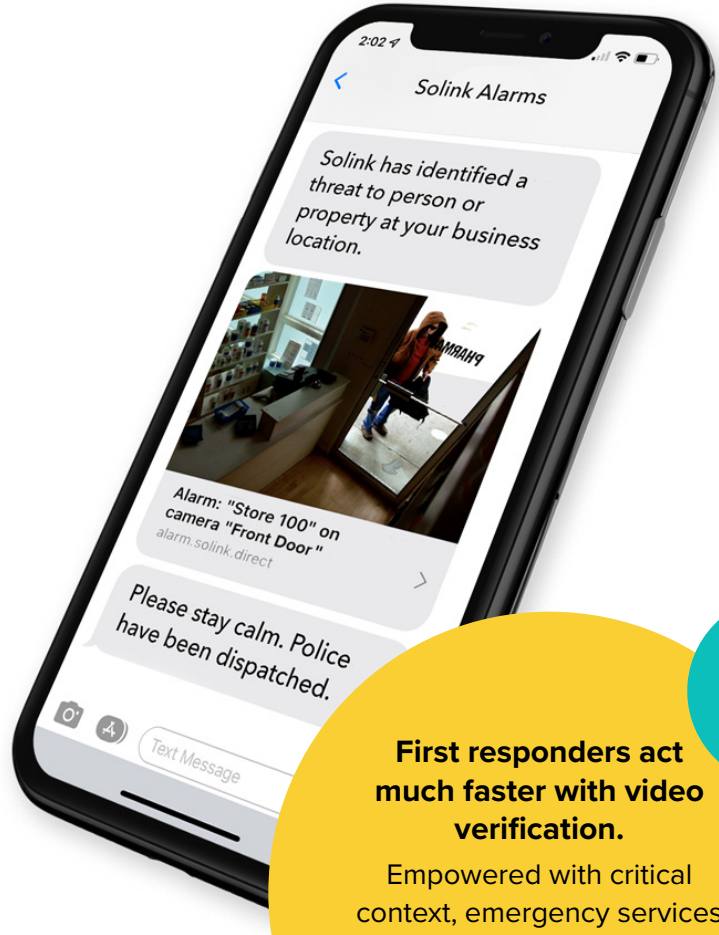

Alarm & Motion Sensors
When a motion or alarm sensor is triggered, an alert is sent to the monitoring center with no additional context.

Video Monitoring & Verification
With Solink, if the answer is no, the agent cancels the alarm. If the answer is yes, the agent immediately dispatches police.

> **First responders act much faster with video verification.**
> Empowered with critical context, emergency services know for a fact that there is a real threat and arrive on-site prepared to take action.

Costly False Alarm Fines
Over 98% of police dispatches are due to false alarms! A false alarm can cost a business anywhere from $50 - $500 or more.

Reduced False Alarms
With eyes on your site, false alarms are a thing of the past. Our agents dismiss false alarms for you, minimizing unwanted disturbances.

Solink eliminates _99.9%_ of false alarms before police dispatch.

Pin Management
A frequent cause of false alarms is when authorized personnel forget their PIN to deactivate the alarm system.

Pin Pad + Video
With video verification, Solink can see that the 'intruder' is in fact a threat or simply an employee arriving early for a shift.

Manual Arming
Manual arming / disarming is prone to human error. People simply forget.

Automated Arming
With Solink, you avoid the stress of forgetting to arm your business after hours.

Physical Sensors
Physical sensors have a tendency to break down over time, resulting in a missed or triggered false alarm.

Proactive Health Monitoring
Proactive camera monitoring provides a view into the health and status of your alarm system.

Hardware & Install
Costly sensor installation and annual maintenance.

No Additional Hardware / Install
Avoid costly installs by utilizing your existing cameras. No need for traditional panels and error-prone sensors.

What Even Happened?
Without video verification, it could take hours - maybe even days to finally piece together the incident.

Easy Incident Reporting
Immediately share an alarm event video & any necessary notes with:
police, insurance companies, stakeholders

Average time it takes Solink to verify footage

From the moment an incident happens.

29.6 sec

In partnership with UL Listed, Five Diamond Certified Monitoring Centers, Solink gives you peace of mind that you are only notified of an alarm event when needed. No issues, no hassle. 24/7, 365-day coverage.
